- % Done changed from 0 to 100

Output(2023/08/22) 输出

- No need to select again when updating order status in bulk (especially when there are multiple products in an order)
- Solution:

1. When opening the orderStatusUpdateForm popup, get the productIds of the checked records in the order list. when building the order list in the popup, determine if the productId of the current row exists in the previously checked list. If so, the current row is selected.

2. Bugfix: Deleted orders not shown in Update order status list

3. Bugfix: Modify the language pack:

old: const SENT_TO_RETAILER_TEXT = 'Sent to Retailer';

new: const SENT_TO_RETAILER_TEXT = 'Sent';

4. Bugfix: The batch operation function(Retailer Received/Send to Customer) does not have a corresponding status,function is not available.

Avoid user action, use simple popup reminders(alert("Not support yet.")).
5. Optimization: The data in the popup list is sorted according to the default sorting rules(o.update_time DESC, op.update_time DESC) of the order list, as far as possible, the data in the order list is displayed in the same order.
