Output (2024/10/28), Output (2024/10/22 - 2024/10/25)

1. Add third-party files bootstrap 5.3.3.
 - We use bootstrap for css framework since it already a lot of components and styles that will make development easier.
2. Restore the original opencart startup files since we might use them in the future.
 - Change pre-action common/login/check to startup/login as login check
3. **Unify some config settings** to web/system/config/default.php
 - db
 - session
 - template
4. **About js files:**
 - **Namespace for js** : for example: web/catalog/view/javascript/easydingzhi/common.js
5. The login function:
 - Empty check and format check use original form validate, and username/password valid check by php.
 - Add easyDingZhi.account for user account operation
 - Compatible with v3 user login
6. Change the language directory and support switch language in front.
 1. The language directory
 - Old: en-gb
 - New: en/zh
 2. **The priority of front language**
 1. session/cookie.
 2. Browser's language preference.
 3. admin setting 'config_language'.
7. Add redis config and the format of the cache key should be CACHE_PREFIX.xxx
 1. CACHE_PREFIX
 2. CACHE_HOSTNAME
 3. CACHE_PORT
8. Fix the input background when autofill.
 1. Add css: -webkit-background-clip: text;
9. Add footer and it should display at the bottom of every page.
 - Currently, admin does not have the function that dynamic set footer, so I use the language way to set the content of the footer
